Overview

The Multifunctional Measurement Station (MMS) software is based on the NI PXI platform. Software is developed in the LabVIEW graphical programming environment. It has a simple and intuitive user interface.

The software supports 10 modulation types: 3 digital and 7 analog, providing generation and analysis of main types of modulated signals.

This software will help the users to gain a better understanding of the modulation/demodulation principles.

Features

- 10 modulation types
- Generation and analysis of modulated RF signals
- Measurement of amplitude-frequency characteristics
- Signal spectrum representation
- Imitation of noises
- Representation of experimental results on the screen (graphs, scope signals, numeric indicators)
